### DETAILED ACTION

Examiner notes that the previous Office action held a lack of unity but listed the wrong claims. (Examiner incorrectly viewed the corresponding PCT claims as opposed to the U.S. claims.) Thus, the following is a correction.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Group I. Claims 1-13 and 45, drawn to a universal protein array.

Group II. Claims 14-22, 43, drawn to a protein interaction assay.

Group III. Claims 23-25, drawn to an assay to determine polypeptide-binding of a probe molecule.

Group IV. Claims 26-34, drawn to a kit for determining polypeptide-binding of a probe molecule. (Claims 27-31 actually claim "The kit of claim 25", but Examiner will assume that Applicant intended to mean--the kit of claim 26-- since claim 25 is not claiming a kit.)

Group V. Claims 35-37, drawn to a method of analysis of protein-molecule interactions.

Group VI. Claims 38-42 and 44, drawn to a method of analyzing a plurality of binding characteristics of an array of polypeptide samples.

The inventions listed as Groups I-VI do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:  
the technical feature linking groups I-VI appears to be that they all relate to a polypeptide array.

However, Renschler et al., 5,512,435, teaches a polypeptide array (column 17, line 52.)

Accordingly, Groups I-VI are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.
